Comet Connect

<u>User Guide</u>

<u>*Table of Contents:*</u>

Note: <u>*Make sure you read all the contents of this PDF*</u>

1) What is Comet Connect?

Comet Connect is a browser tool that helps you "teleport" your AI conversations. It lets you save a chat from one AI (like ChatGPT) and move it into another (like Claude or Gemini or Grok) so you never lose your context. It can also export contents of a website (like wikipedia, news report, articles etc) to your LLM web app.

2) What It Does

Save Your Chats: Download your entire conversation history with one click.

Keeps You Safe: Automatically removes sensitive info like emails, phone numbers, and credit card numbers etc before saving.

Auto-Transfer: Automatically types your old conversation into a new AI window so you can pick up exactly where you left off.

Security Lock: The tool automatically turns itself off if you visit a banking or password site.

3) How to Set It Up (One-Time Setup)

Since this is a private tool, you need to add it to your browser manually. It only takes 30 seconds:

IMPORTANT: Unzip Before Installing, the downloaded file is a **.zip** archive. You must **Extract/Unzip** it first!

- **Windows:** Right click the Comet-Connect.zip file → Select **"Extract All"**.

If your browser is **CHROME,** follow the below steps:
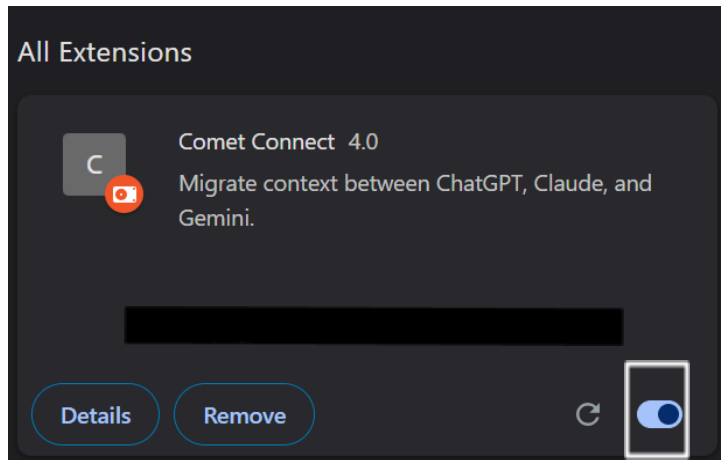

Step 1) search up chrome://extensions

Step 2) Turn on the developer mode (right top corner).

Step 3) Click on the "Load Unpacked" button, and select the downloaded folder from the website.

Step 4) You can see the folder unpacked in the extensions, turn on the extension and **reload** the page.

Step 5) Once you have successfully activated the extension, you should see 2 buttons in the right bottom corner of your web browser.

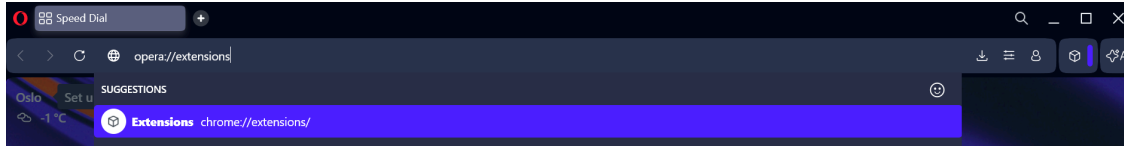

Remember: *This tool only comes into activation after you have searched something on the browser, otherwise the buttons <u>won't</u> be visible in your browser home page.*
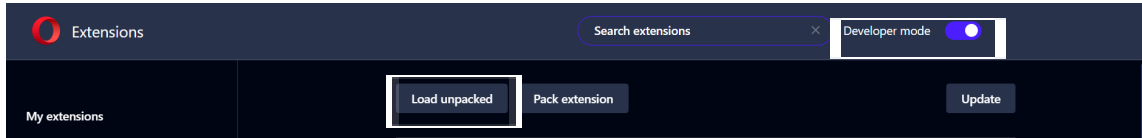

That's it, you should be able to see the icons in the browser and you can seamlessly use this tool!

If your browser is **OPERA/OPERA GX,** follow the below steps:
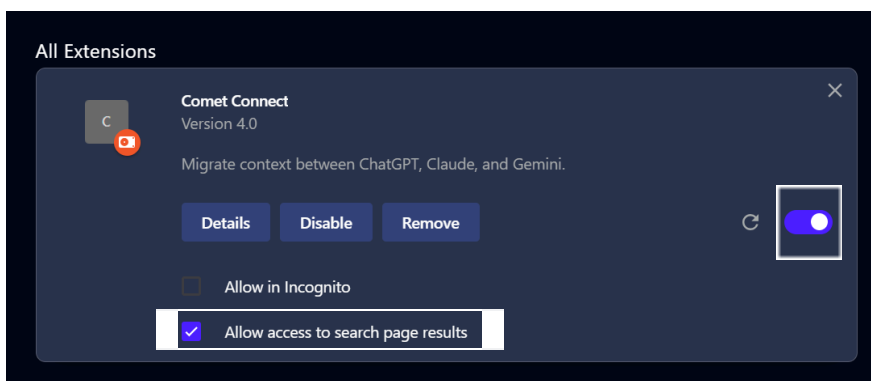

Step 1) search up opera://extensions

Step 2) Turn on the developer mode (right top corner).

Step 3) Click on the "Load Unpacked" button, and select the downloaded folder from the website.

Step 4) You can see the folder unpacked in the extensions, turn on the extension and **reload** the page. (make sure you enable "*Allow access to search page results*").

Step 5) Once you have successfully activated the extension, you should see 2 buttons in the right bottom corner of your web browser.
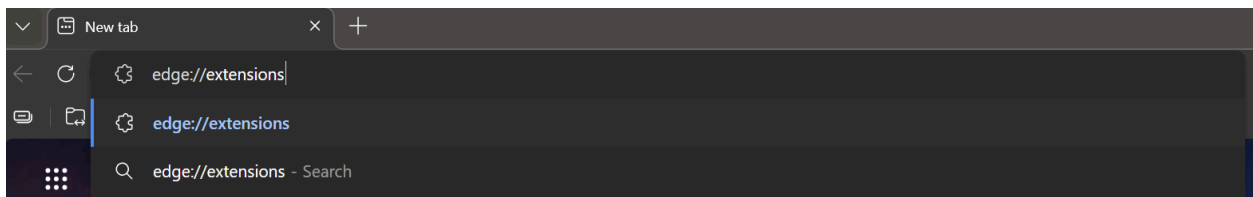

Remember: *This tool only comes into activation after you have searched something on the browser, otherwise the buttons <u>won't</u> be visible in your browser home page.*
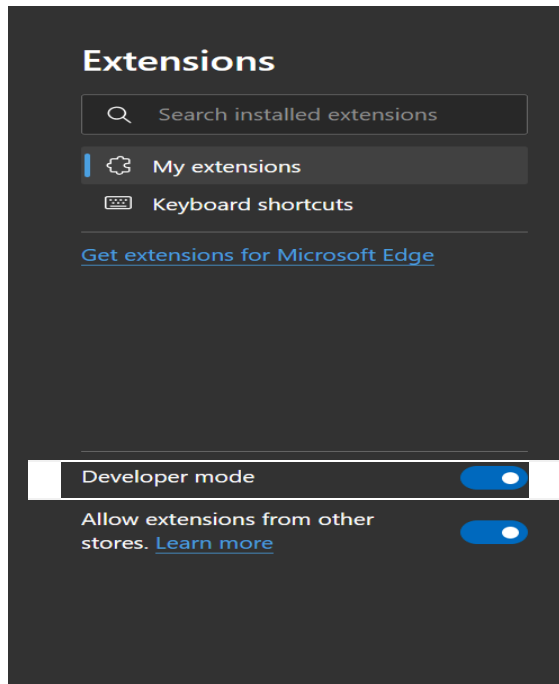

That's it, you should be able to see the icons in the browser and you can seamlessly use this tool!

If your browser is **MICROSOFT EDGE,** follow the below steps:
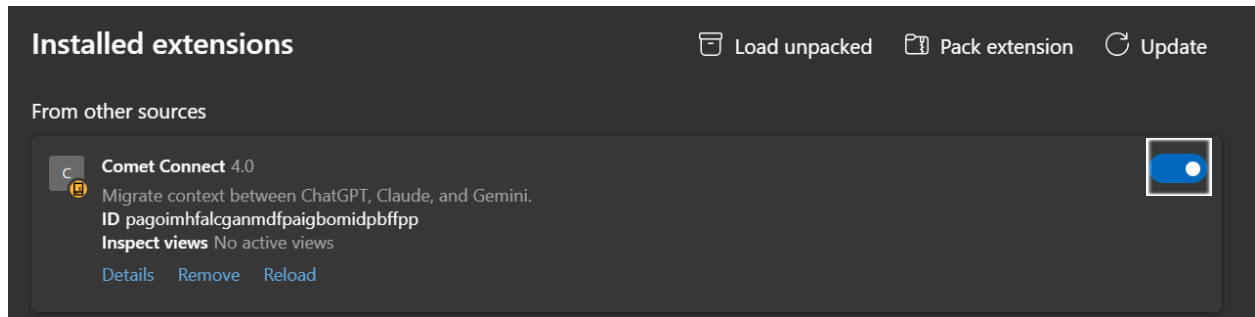

Step 1) search up edge://extensions

Step 2) Turn on the developer mode (left side).

Step 3) Click on the "Load Unpacked" button, and select the downloaded folder from the website.

Step 4) You can see the folder unpacked in the extensions, turn on the extension and **reload** the page.

Step 5) Once you have successfully activated the extension, you should see 2 buttons in the right bottom corner of your web browser.

Remember: *This tool only comes into activation after you have searched something on the browser, otherwise the buttons <u>won't</u> be visible in your browser home page.*

That's it, you should be able to see the icons in the browser and you can seamlessly use this tool!

If you use OTHER browser, make sure to follow these steps:

1) Search up (your browser name)://extensions
2) Turn on the 'developer mode'
3) Click on the "Load Unpacked" button, and select the downloaded folder from the website.
4) Open the folder and you should be able to see the extension loaded
5) Reload the extension once the extension has been added.
6) Once you have successfully activated the extension, you should see 2 buttons in the bottom corner of your web browser.

Remember: *This tool only comes into activation after you have searched something on the browser, otherwise the buttons won't be visible in your browser home page.*

That's it, you should be able to see the icons in the browser and you can seamlessly use this tool!

4) Compatibility Note

Comet Connect is currently available for desktop browsers only (Chrome, Edge, Brave, and other Chromium based browsers) on macOS, Linux, and Windows.

Currently Not Supported:

- **Mobile**: Extension support is not available on iOS (iPhone/iPad) or Android versions of Chrome.
- **Safari**: Not natively supported. We recommend using a Chromium based browser for the full bridging experience.
- **Firefox**: Support is currently in development.

5) How to Use It

Step 1: **Saving a Chat (Export)**
1. Go to the AI chat you want to save.
2. Scroll to the top of the conversation.
3. Click the Orange Button (🛰️) in the bottom right corner.
4. The tool will clean the chat and download a file to your computer.

Step 2: Moving the Chat (Import)
1. Open a new AI window (e.g., open a fresh ChatGPT or Gemini tab).
2. Click the Green Button (📥) in the bottom right corner.
3. Select the file you downloaded in Step 1.
4. Let go of the mouse! The tool will automatically type out your history for you.

Note: This is a browser extension only, and its features cannot work in regular applications on your desktop.

6) Important Note

This tool is designed to make your life easier, but always check your files before sharing them. The "Safety Shield" is good, but you are responsible for your own data!
